## Unit 7 Vocabulary

| Vocabulary Term | Definition |
| :--- | :--- |
| absolute value | The distance between a number and zero on a <br> number line. |
| coordinate <br> plane | A plane, also called a coordinate grid or <br> coordinate system, in which a horizontal number <br> line and a vertical number line intersect at their <br> zero points. (0,0) |
| Inequality | A statement that compares two quantities using <br> the symbols $>,<, \geq, \leq$, or $\neq$. |
| integer | Any number from the set $\{. . .-4,-3,-2,-1,0,1,2,3$, <br> $4 \ldots .$.$\} where ... means continues without end.$ |
| negative integer | A number that is less than zero. |
| Opposites | Two integers are opposites if they are represented <br> on the number line by points that are the same <br> distance from zero, but on opposite sides of zero. <br> The sum of two opposites is zero. |
| ordered pair | A pair of numbers used to locate a point in the <br> coordinate plane. An ordered pair is written in the <br> form (x-coordinate, $y$-coordinate). |
| Origin | The point (0, 0) in a coordinate plane where the $x-$ <br> axis and the $y$-axis intersect. |
| positive integer | A number that is greater than zero. It can be <br> written with or without a + sign. |
| Quadrants | The four regions in a coordinate plane separated <br> by the x-axis and $y$-axis. |
| Reflection | A transformation in which a figure or ordered pair <br> is flipped over a line of symmetry. |
| Sign | A symbol that indicates whether a number is <br> positive or negative. |
| $x$-coordinate | The first number in an ordered pair. (It tells you <br> how far left or right to go from the origin.) |
| $y$-coordinate | The second number in an ordered pair. (It tells <br> you how far up or down to go from the origin.) |
